

# AI AS THE TEACHERS OF THE FUTURE

By: Josefa Pacheco

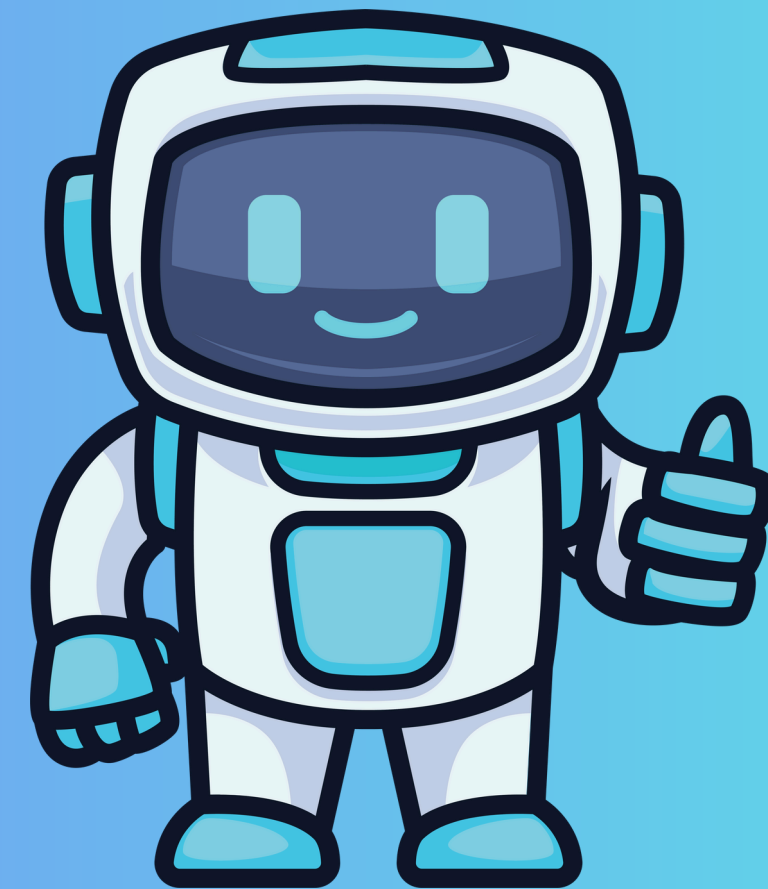

# Introduction

In this presentation, I'll explore the question: Can AI replace teachers in the future? Let's analyze both sides of this debate and imagine the future of AI in education.

# Areas Where AI Can Help Teachers

- Personalized Learning
- Tutoring and Extra Practice
- Analyzing Student Progress:
- Grading and Testing

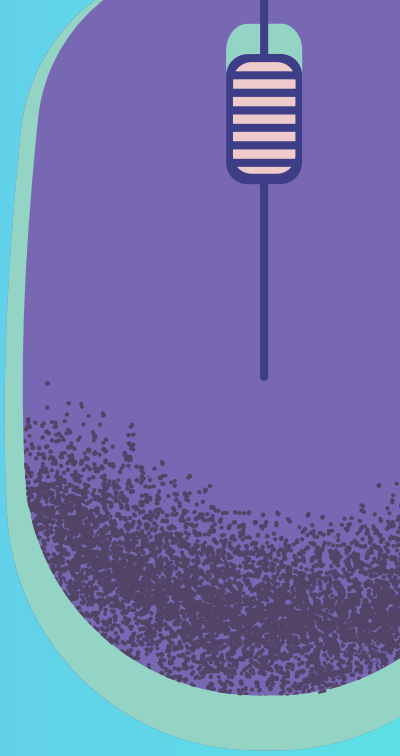

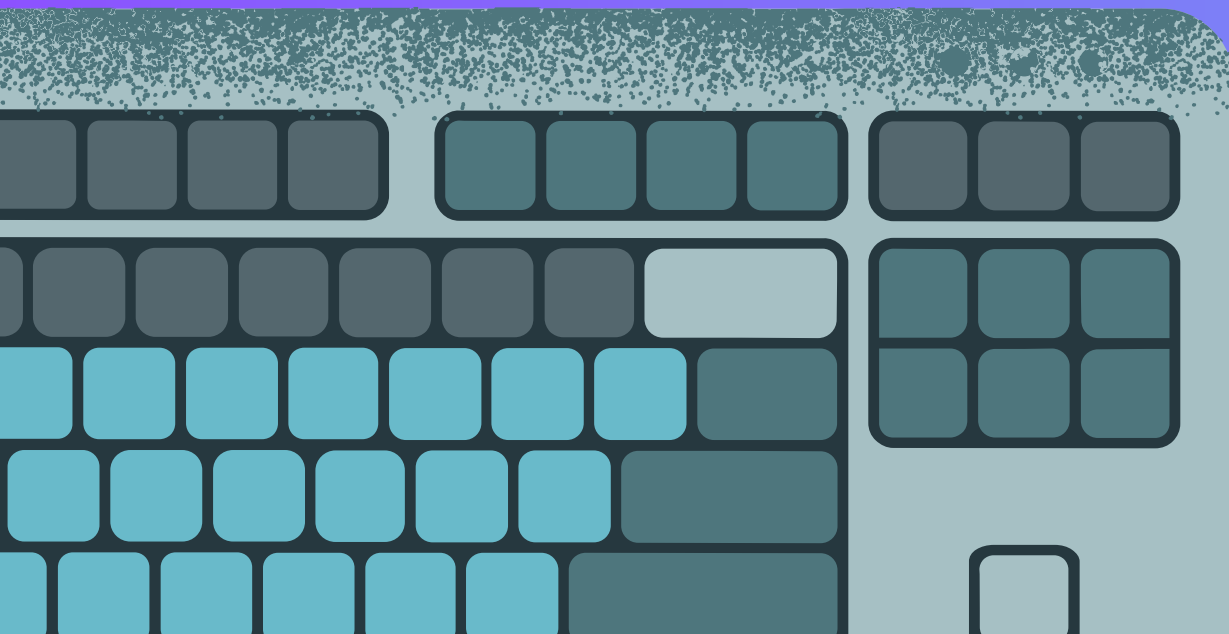

# Areas Where AI Can't Replace Teachers

- Emotional Support
- Being a Mentor and Role Model
- Leading Discussions and Debates
- Teaching Critical Thinking and Creativity

# Expert's opinion

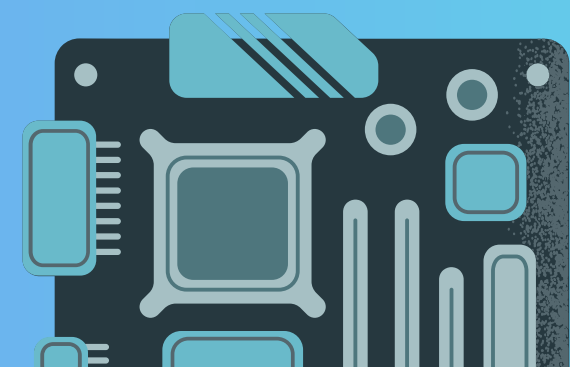

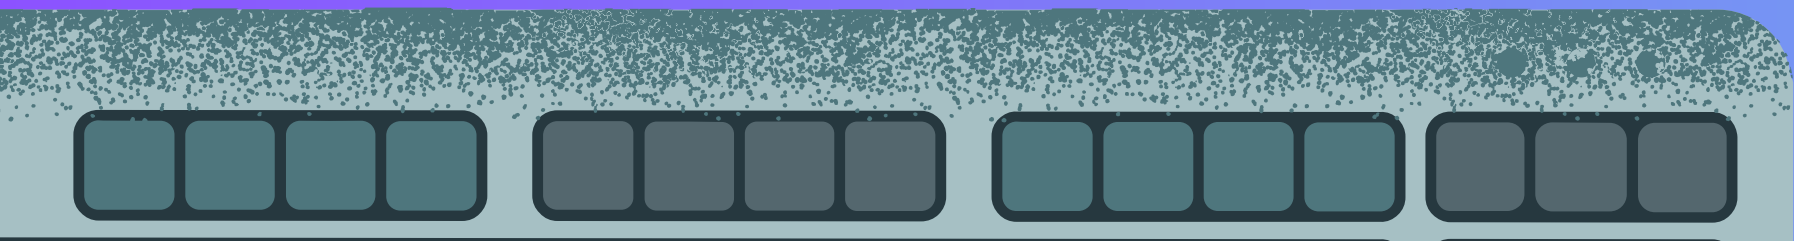

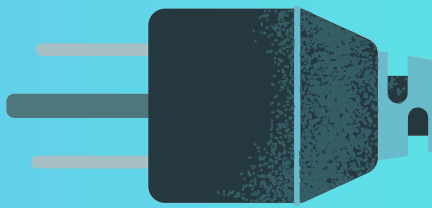

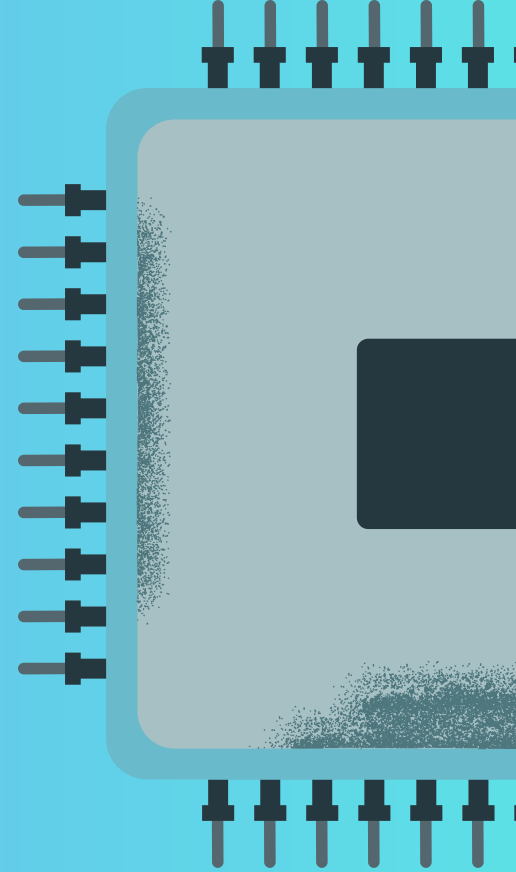

- Several educational trials have explored AI's role in teaching without human instructors, and the outcomes often emphasize the irreplaceable value of human educators.
- 60% of teachers use AI in the classroom.

# CONCLUSION

## Can AI replace teachers in the future?

As a conclusion, AI can help with tasks that are repetitive or based on data, like grading and adapting lessons to each student's level. The issue is that teaching also requires human qualities like empathy, understanding, and creativity which AI can't replace. So, AI is a helpful tool for teachers but not a full substitute.

# THANK YOU!
